

Most Common X12 Format File Rejections

The ISA and GS Segments are first in the transaction format. Ensure that these fields are carefully coded to reflect the requirements of the X12N transaction formats.

Reject Type	Example of Correct Transaction Format
<ul style="list-style-type: none"> ◆ Trading Partner ID missing or invalid in the ISA06 segment. ◆ “100000” missing in the ISA08 segment 	<p>ISA*00* *00* *ZZ*999999 *ZZ*100000 (more required)</p>
<p>The ISA and GS envelope segments should contain the delimiters the submitter indicated during their enrollment. In the following examples these symbols are used:</p> <p style="padding-left: 40px;">* is used as the element delimiter</p> <p style="padding-left: 40px;">~ is used for segment terminators</p>	
Reject Type	Example of Correct Transaction Format
<ul style="list-style-type: none"> ◆ Trading Partner ID missing in the GS02 segment ◆ Payer ID (Payer) is missing in the GS03 segment 	<p>GS*HC*999999*77034*20030611*145059*000001*X*004010X098A1~</p>
<p>* Fixed values are highlighted in red.</p>
